

**IN THE CLAIMS:**

Please amend the claims as shown in following Listing of Claims.

1. **(currently amended)** A device for displaying at least one picture comprising, in combination:
  - a support member;
  - a plaque including a plate member and an adhesive layer on a side of the plate member for adhering the picture to the plate member; and
  - a swivel hanging the plaque from the support member and having a rotational axis; wherein the swivel permits unlimited rotational movement of the plaque about the rotational axis in either direction upon application of external forces thereto.
2. **(original)** The device according to claim 1, wherein the plaque includes another adhesive layer on an opposed side of the plaque member for adhering another picture.
3. **(original)** The device according to claim 1, wherein the plate member comprises paperboard.
4. **(original)** The device according to claim 1, wherein the plate member comprises a magnetic material.
5. **(original)** The device according to claim 1, wherein the plate member comprises a luminescent material.
6. **(currently amended)** The device according to claim 1, wherein the swivel ~~permits the plaque member to freely rotate in either direction~~ is a barrel-type swivel connector.
7. **(original)** The device according to claim 1, wherein the support member is adapted to rest on a table top.

8. **(original)** The device according to claim 1, wherein the support member is adapted to support a plurality of the plaque members.

9. **(original)** The device according to claim 1, wherein the support member includes a hook.

10. **(original)** The device according to claim 1, wherein the support member includes a suction cup.

11. **(original)** The device according to claim 1, wherein the support member includes a magnet.

12. **(currently amended)** A device for displaying at least one picture comprising, in combination:

a plaque including a plate member and an adhesive layer on a side of the plate member for adhering the picture to the plate member; and

a swivel secured to the plaque for hanging the plaque and having a rotational axis; wherein the swivel permits unlimited rotational movement of the plaque about the rotational axis in either direction upon application of external forces thereto.

13. **(original)** The device according to claim 12, wherein the plaque includes another adhesive layer on an opposed side of the plaque member for adhering another picture .

14. **(original)** The device according to claim 12, wherein the plate member comprises paperboard.

15. **(original)** The device according to claim 12, wherein the plate member comprises a magnetic material.

16. **(original)** The device according to claim 12, wherein the plate member comprises a luminescent material.

17. **(currently amended)** The device according to claim 12, wherein the swivel ~~permits the plaque member to freely rotate in either direction~~ is a barrel-type swivel connector.

18. **(cancelled)**

19. **(cancelled)**

20. **(cancelled)**

21. **(cancelled)**

22. **(cancelled)**

23. **(new)** The device according to claim 1, wherein the plaque includes a release layer covering the adhesive layer and removable from the adhesive layer such that the adhesive layer remains on the plate member and is exposed for attachment of the picture thereto.

24. **(new)** The device according to claim 12, wherein the plaque includes a release layer covering the adhesive layer and removable from the adhesive layer such that the adhesive layer remains on the plate member and is exposed for attachment of the picture thereto.
